THE SOLUTION FOR PEOPLE WITH ALLERGIES

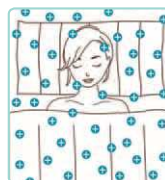

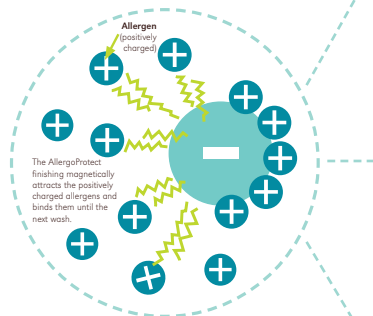

Simple, yet effective

EXCLUSIVELY FROM CENTA-STAR: BEDDING THAT BIND ALLERGENS MAGNETICALLY.

After two years of development, Centa-Star launches a sensation in the bedding market with a duvet for people with allergies that binds allergens like a magnet. Previously, people with allergies could only choose between duvets and pillows with rustling, non-breathable casings or a biocide finishing. With the purely physical principle of AllergoProtect

tect, people with allergies can now also enjoy all the advantages of a lightweight, soft and breathable duvet without restrictions. AllergoProtect was clinically tested in a study with subjects suffering from dust mite allergy, examined by the Hohenstein Institutes and was awarded the ECARF certificate and OEKO-TEX STANDARD 100 Class I.

Use pillow, duvet and mattress protector from the AllergoProtect bedding line for the best possible effect.

Conventional bedding

We are permanently surrounded by allergens – especially in bed. We inhale the positively charged allergens when sleeping. People with dust mite allergy react to this with symptoms that feel like a cold, blocked nose and irritation of the throat to asthmatic attacks. **The consequence is poor sleep as if you were actually suffering from a cold.**

The magnetic force of AllergoProtect

The duvet, the mattress protector and the pillow feature negatively charged particles that attract the positively charged allergens like a magnet and are proven to bind them until the next wash. You can enjoy a calm and relaxing sleep. **Very simple, yet highly efficient!**

Hygienically clean after washing

When the bedding is washed, the allergens are fully released and washed away to give you a fresh duvet, pillow and mattress protector free from allergens. This physical effect will not be washed out, so that people with allergies get utmost sleep comfort – permanently.

All the advantages of the world's first AllergoProtect at a glance:

- Technology to fight allergens for a relaxing sleep
- Without biocides: the allergens are bound in a purely physical principle
- Efficiency proved in clinical tests, awarded the ECARF certificate
- Can be used without encasings for the utmost sleep comfort for people with allergies
- Breathable duvet with perfect thermal physiology*
- OEKO-TEX STANDARD 100, Class I
- 100 % made in Germany

* Perfect thermal physiology means that no moisture collects under the duvet and that the temperature under the duvet remains constant and pleasant. Under a duvet with a poor thermal physiology, you wake up easily because you are cold or hot.

OUR WASHING RECOMMENDATION
WASH YOUR ALLERGOPROTECT BEDDING AT 60 °C IN A DOMESTIC WASHING MACHINE WHENEVER YOU FEEL THAT THE EFFECT IS FADING.
